

Fire Safety Certificate is a document attesting the conformity of products established safety requirements. In Russia, the basis for issuing such a document is a protocol test of type specimens. Each type of product characterized by its own requirements and methods of certification tests. Their description is provided in accordance with GOST and technical regulations for a particular product.

### **What is a fire certificate? And where can I get?**

Fire certificate - it's documented permission to use the product. He issued only one product that meets all the requirements for fire safety. Involved in the issuance of such documents by certification bodies accredited by the MOE, which shall decide on the compliance or non-conformity with requirements of fire safety.

It should be noted that the acquisition of fire safety certificate is quite troublesome and expensive to treat. Quickly and easily get a fire certificate you can contact our Certification Center, which will execute all necessary documents and will issue a document ready to hand.

The procedure for obtaining a certificate of fire safety is the same as for imports and for domestic goods. But more important, certification is a fire in relation to imported goods is. Every product that is imported into the Russian Federation must be accompanied by a list of required documents. Fire certificate in this list is by no means the last place. For the successful passage of customs it will need to provide customs officers. Obtaining a certificate of fire safety - troublesome and rather complicated. In addition, the certification system of Russia has a drawback - a small amount of state accredited certificates to special laboratories.
